BOOTSTRAP CLASSES REVIEW

1. Containers and Grid System (Grid Layout)

To organize the main structure and responsive columns of a webpage, we use the following classes:

- **container**: Creates a centered container with a maximum width that adapts to the screen size.
- **row**: Defines a row used to group columns within the grid system.
- **col-md-4**: Creates a column that occupies 4 of the 12 available columns on medium-sized devices (md) and larger. (Ideal for displaying 3 cards per row.)
- **col-sm-6**: Creates a column that occupies 6 columns (half of the screen width) on small devices (sm).
- **d-flex**: Turns an element into a flexible container using **Flexbox**.
- **justify-content-between**: Distributes flex items with the maximum possible space between them.

---

2. Navigation Bar (Navbar)

Essential classes for creating responsive and fixed top navigation menus:

- **navbar**: Required base class for a navigation bar.
- **navbar-expand-lg**: Makes the menu collapse on small screens and expand horizontally on large (lg) screens.
- **fixed-top**: Fixes the navigation bar to the top of the browser window, even when scrolling.
- **navbar-brand**: Applied to the logo or main brand title.
- **navbar-toggler** and **navbar-toggler-icon**: Create the hamburger button used to display the menu on mobile devices.
- **collapse** and **navbar-collapse**: Group menu items that will be shown or hidden when the toggle button is clicked.

---

3. Spacing, Borders and Visual Utilities

Bootstrap allows margins, padding, shadows and borders to be applied quickly using utility classes.

Spacing

- **py-5**: Large vertical padding (*padding-y*, level 5).
- **mt-5 / mb-4**: Top margin level 5 and bottom margin level 4.
- **me-2**: Right margin (*margin-end*).
- **p-4 / p-5**: Uniform internal padding.

Visual Appearance

- **shadow** or **shadow-sm**: Adds a subtle shadow to an element.
- **rounded** or **rounded-3**: Rounds the corners of elements.
- **border**: Adds a standard border.
- **h-100**: Forces an element or card to occupy 100% of the available height.
- **overflow-hidden**: Hides any content that extends beyond the container boundaries.

---

4. Typography and Colors

Text Colors

- **text-success**
- **text-secondary**
- **text-muted**
- **fw-bold**
- **fw-semibold**

Background Colors

- **bg-light**
- **bg-white**
- **bg-success**
- **bg-dark**

Highlighted Headings

- **display-5**
- **fs-4**
- **lead**

---

5. Forms and Buttons

- **form-label**: Recommended class for form field labels.
- **form-control**: Applied to inputs, select elements, and text areas to use Bootstrap's built-in styling.
- **btn** and **btn-success / btn-outline-success**: Classes used to style action buttons or links that look like buttons.
- **d-grid**: Converts the button container into a full-width block grid, useful for making a button occupy all available space (often used with **btn-lg**).
